- **Version control systems**
  GIT, SVN, TFS
- **Issue trackers**
  JIRA, Redmine, Pivotal Tracker

- **CI systems**

  Bamboo, Jenkins, Concourse
- **Other**

  Basic knowledge of HTML, JavaScript, SQL, Assembler

ABOUT ME

I'm a mobile software developer for a few years now. I've started with Windows Phone/WinRT, but later turned to iOS and Android. I've been working on many different projects, from social startups to medical and financial systems for international companies and teams that came in all shapes and sizes (from being single mobile dev in a project to being part of a huge teams distributed in multiple countries around the world). Currently I'm into Android development and I would like to follow this path in the future.

INTERESTS

IT news, music, sci-fi and fantasy books, history, photography, computer games.

That's all. Thanks!

;)
